Dear Comox Valley Mayors and Councillors

Our organization, the Comox Valley Council of Canadians has signed onto a letter calling on the BC government to confront the climate emergency with bold action in order to mitigate the type of heat waves, drought conditions and forest fires we have recently experienced in BC. We feel that the provincial government's Clean BC climate action plan is not strong enough to limit warming to 1.5 degrees C and will not keep British Columbians safe from the impacts of climate change.

This letter has been signed by over 90 environmental and climate groups around the province. We have been asked to enlarge that circle to include others who are concerned about the impacts of the climate crisis on citizens within their mandate. Decisions made by municipal governments have a direct impact on the communities within their jurisdiction. If a majority of municipal governments across BC signed onto such a letter it would be a significant call to action for our provincial government.

The organizers of this campaign are going to present this letter to Premier Horgan and his MLAs by Sept. 26. However we want to continue to expand this call for climate action beyond those who have signed on already to include a wider ranch of citizens.

We ask that you read this letter and consider signing onto this call for climate action by the provincial government.

We look forward to hearing from you on this issue.

Respectfully, Barbara Berger on behalf of the CofC Comox Valley Chapter

September 9, 2021

Dear Premier Horgan and the Government of BC,

Re: Confront the Climate Emergency

We write on behalf of diverse environmental, Indigenous, labour, health, business, local government, academic, youth, and faith communities who collectively represent XX British Columbians.

We call on the BC government to recognize the urgency and alarm that people all over the province are feeling as the climate crisis directly impacts our communities and our health: deadly heat waves, wildfires, drought, floods, crop failure, fisheries collapse, and costly evacuations and infrastructure damage. These climate-related impacts are unprecedented and intensifying. Indigenous peoples stand to be disproportionately impacted by climate events despite successfully taking care of the land since time immemorial.

The latest report from the Intergovernmental Panel on Climate Change is a 'code red' for humanity. The International Energy Agency has called on world governments to immediately stop investments in and approvals of new oil and gas projects. The provincial government's *CleanBC* climate action plan is insufficient to limit warming to 1.5°C and will not keep British Columbians safe from the worst impacts of climate change.

We therefore urge the BC government to develop and implement a transformative climate emergency plan that recognizes the interconnected climate, ecological, and social crises; embeds equity, anti-racism, and social justice at its core; and upholds Indigenous Title and Rights, and Treaty Rights.

To implement the rapid systemic change that is required, we call on the provincial government to demonstrate the leadership necessary to confront the climate emergency, and immediately undertake the following 10 actions:

1. Set binding climate pollution targets based on science and justice

Reduce BC's greenhouse gas emissions by \sim 7.5% per year below 2007 levels. Set binding reduction targets of 15% by 2023; 30% by 2025; 60% by 2030, and 100% by 2040 (below 2007 levels). Review and update targets regularly as climate science evolves.

2. Invest in a thriving, regenerative, zero emissions economy

Invest 2% of BC's GDP (\$6 billion dollars per year) to advance the zero emissions economy and create tens of thousands of good jobs. Spend what it takes to immediately reduce greenhouse gas emissions and create new economic institutions to get the job done. Ensure that the economic component of Aboriginal Title is recognized through the sharing of benefits and revenues that result.

3. Rapidly wind down all fossil fuel production and use

Immediately stop all new fossil fuel infrastructure including fracking, oil and gas pipelines,

liquefied natural gas (LNG), and fossil fuel-derived hydrogen. Rapidly phase out and decommission all existing fossil fuel production and exports.

4. End fossil fuel subsidies and make polluters pay

End all fossil fuel subsidies and financial incentives by 2022. Ensure that those industries that profit from fossil fuel pollution pay their fair share of the resulting climate damage.

5. Leave no one behind

Ensure a just transition for fossil fuel workers, resource-dependent communities, and Indigenous and remote communities impacted by fossil fuel production. It will be critical to collaborate in true partnership with Indigenous peoples in climate action. Prepare our communities for the impacts of the climate crisis to minimize human suffering and infrastructure damage. Support those most vulnerable to climate change impacts.

6. Protect and restore nature

Protect 30% of terrestrial and marine ecosystems by 2030; support and invest in Indigenous-led conservation initiatives; restore natural ecosystems to enhance ecosystem functions and services, preserve biodiversity, increase carbon sequestration, and improve human and ecosystem resilience to climate impacts. Impose an immediate moratorium on the industrial logging of all old growth forests which are critical carbon sinks.

7. Invest in local, organic, regenerative agriculture and food systems

Incentivize carbon storage in soil, restore biodiversity, and ensure food sovereignty and food security across the province. Increase consumption of plant-based foods, and reduce food waste. Support Indigenous communities that wish to maintain traditional food systems and enhance their food security.

8. Accelerate the transition to zero emission transportation

Invest in affordable, accessible, and convenient public transit within and between all communities. Reallocate infrastructure funds from highway expansion to transit and active transportation (cycling, rolling, and walking). Mandate zero emissions for all new light vehicles by 2027, and all medium and heavy duty vehicles by 2030.

9. Accelerate the transition to zero emission buildings

Ban new natural gas connections to all new and existing buildings by the end of 2022. Create a Crown Corporation to mobilize the workforce to retrofit all existing buildings and eliminate fossil fuel heating by 2035, and to build new affordable zero emissions buildings.

10. Track and report progress on these actions every year

Embed all of these actions in legislation to ensure accountability, transparency, and inclusion. Establish rolling 5-year carbon budgets that decline over time towards zero emissions by 2040 or sooner.

Tackling the climate crisis offers an unprecedented opportunity to generate new, vibrant economic and social wealth as we transform where our energy comes from and how it is used. It offers an opportunity to achieve energy security, ensure food security, develop more sustainable local economies and jobs, transform our buildings, redesign transportation, reduce pollution, improve human health and wellbeing, and enhance our quality of life. The transition from fossil fuels to a zero emissions economy has clear benefits for people and natural ecosystems, and is an opportunity to create a more prosperous, just, and equitable society.

Every person, every business, every industry, and every government has a role to play as we coordinate individual and collective actions to create a thriving, resilient, and regenerative society that respects its interdependence with healthy ecosystems and a safe climate.

British Columbia is positioned to become a visionary world leader and demonstrate that innovative and rapid change is possible as we transition to a zero emissions economy.

We urge you to seize these opportunities, and demonstrate to British Columbians that our government is indeed a true climate leader by implementing the 10 climate emergency actions set out in this letter.

We must act now.

Sincerely,

[organizations]
