Re:

Bylaw No. 593

My comments/concerns are:

- I do support this bylaw.
- I do support this bylaw, subject to the conditions listed below.
- I do not support this bylaw.

We do not have the water capacity
for this bylaw.

This will be build on sensitive wet
lands, the regional district maps
are not update to the proposed
area. It is not a substantiable
choice for the area.

Re:

Bylaw No. 593

My comments/concerns are:

- I do support this bylaw.
- I do support this bylaw, subject to the conditions listed below.
- I do not support this bylaw.

- I do not want a trail or road or pathway running down the length of my property
- water will pool behind my property adding to the mosquito problem.
- I believe that the current zoning makes way more sense in re: water & density

Re: Bylaw No. 593 Applicant: Unger

Proposed: Rezone from Rural Eight (RU-8) to Residential One Exception Ten (R-1-10)

File:

Attn Brian Chow Rural Planner, Chair and Directors Edwin Grieve, Arzeena Amir, Daniel Arbour, and Staff of the Electoral Area Services Committee.

Description:

The home I have occupied since 1992 is located adjacent to the Unger property on Wilfred Rd.

The proposed property has a bench/ridge which runs SE to NW from a mid point of the property along Wilfred Rd to the NW corner, roughly where it intersects with the creek downstream from Paulsen Rd. (see figure 7 of Staff Report Dec 02 2019 "Russell Dyson"). The southwest portion of this bench above the ridge line is the only portion that is suitable for a home, (acknowledging this available land is limited and the stream divides it into 2 portions.)

I know this piece of land well and in my opinion due to hydrology including both the surface and ground water this is not a suitable site for residential development.

Note: this land will not perk for conventional septic waste systems. (septic tank and field).

The watercourse identified on figure 7 as a "ditch" - which dissects the Unger property from the SW to the NE is in fact a stream originating at or near Miracle Beach Rd that was covered over when homes were constructed in or about 1960.

This stream runs consistently 12 months of the year and is habitat for many species of bird and wildlife.

On the North side of the property is another watercourse, riparian area which also runs consistently 12 months of the year. And is known by many to have populations of coho salmon, and invertebrates.

This stream originates to the west of Paulsen Rd at what once was a wetland habitat prior to the current owner Kip Keylock drained and diverted by excavating a network of large smooth open ditches.

With the 1 in 200 year rain events we now experience several times a year the water flows here are excessive and flood the north side of the Unger property.

Note these 2 creeks empty to the sensitive riparian zone, the Saratoga Wetland. (figure 6) to the NW - immediately adjacent to the Unger property.

Due to the proximity of the Saratoga Wetlands - I suggest it is necessary that any development construction be conducted in such a manner there is minimal impact to the existing vegetation, forest floor and recovering canopy from the clear cut harvesting the owner completed roughly 12 years ago.

In my opinion this is a difficult property to control and manage the residential runoff water from entering the adjacent Saratoga Wetlands riparian salmon habitat.

Specifically - figure 7 SPEA Watercourse, (ditches) "Stream".. I am most interested to assure the planner and the committee have a copy of the original Feb 2017 consultant report (note you have included as Figure 7 the revised current environmental "PRM" report, dated June 2019)..

I have known of instances where the environmental reports prepared under the professional reliance model now a common practice within government risk that the process favours the interests of the proponent's application, who is the payor and

exclusive owner of the reports generated to support the application.
I feel all reports commissioned need to be available and reviewed by the planning department, as the stewards of the community's future

The Asks:

_ Given the BCOB water capacity remains unknown, I request there be an immediate and firm hold on all rezoning and building permits in the saratoga miracle beach area. When the CVRD has determined the number of additional BCOB hookups are assured / guaranteed and the LAP is finalized (IE the water carrying capacity for saratoga miracle beach is known).

My memory tells me that in 2011 the CVRD believed there were 100 additional water hookups available (please correct me if I err).

However since that time with the variability in weather patterns, as predicted we are definitely experiencing less rainfall in the summer months when demand for water is at the highest with demands from tourism, livestock, vegetable gardens and landscaping (trees lawns flower beds). The demand on the BCOB system peaks at over 6000 individuals consuming water each day.

Is my opinion and speaking on behalf of our community - the assurity of drinking water is priority one - and therefore no additional approvals on building lots or rezoning of land be allowed til we have plenty water for each member of the community.

(note since 2011, when there was to my memory 100 additional hookups - the CVRD has authorized a number of development proposals which require BCOB water hookups.

* watutco 143 residences, saratoga beach estates 143 lots, with phase 2 planned, miracles beach estates 17 lots (or more ?) and their advert states - "phase 2 coming soon", driftwood estates, and individual new homes in saratoga miracle beach area (probably 30).. and more importantly the solution the BCOB had to the limited water capacity the well 3 was declined by the SRD....

Also consider the impact of the anticipated sea level rise and flooding along the lower reaches of the oyster river and the saltwater foreshore flood plain zone to the BCOB system..

Make a change in course now - allowing the developments already approved access to water, and assure all existing homeowners will continue to receive the water from the BCOB system.

_ With consideration of my concerns expressed above,

Any approvals include severe restrictions on clearing and disturbing all vegetative cover (indigenous trees, shrubs and grasses, etc) and strict management and control of all waste - runoff water, human septic fields, and waste water.

_ An independent assessment for the Unger property (CVRD funded) of riparian species present and for wildlife identify any presence of species at risk..

_ No broad ditching that permits flood pace flows in the watercourses from heavy rain and snow falls or storm water.

**** The Best and Only Acceptable Solution (for all concerned) _ And in the big picture - the least cost !:

The Unger Property on Wilfred Rd:

It is my opinion the best use of this land - is as a green space, in perpetuity as a jewel in the saratoga miracle beach community.

Importantly Note - A connecting network of trails or in the least roadside walkways "do not exist" in this community

___ And the Solution is:

Dare to dream _ and visualize a trail network and a sustainable wildlife corridor from the miracle beach school and wilfred rd - along the boundary of the saratoga wetland connecting to the regional driftwood marine park on clarkson rd. And north to the expansive sands saratoga beach, where the oyster river meets the salish sea, or south to the fabulous miracle beach provincial park.

Please consider and then embrace the decision to create this legacy of a community green space, connecting residents of miracle beach rd and henderson ave saratoga beach to seaview rd to mclarey ave to the single lane bridge to the commercial business at discovery foods on glenmore rd and the oyster river nature park.

To my mind this is the perfect outcome - the creation of the "Unger community forest" green space..The hub connecting a network of trails to all points of saratoga miracle beach !

The terms of purchase may possibly include tax advantage for the owners,Mr and Mrs Unger, or it be accomplished as a straightforward purchase on behalf of the residents of the community by the CVRD's regional parkland acquisition fund..

What a gem this will make for the many new owners living here as envisioned under the regional growth strategy - this one of the 3 settlements nodes outside the municipal / urban boundaries of comox courtenay and cumberland.. And as a bonus this large connecting park area and wild life corridor will enhance and expand the appeal for the tourist experience, rewarding the immediate economic possibilities forever and the CVRD's tax base realized from this boost to property development at the saratoga beach estates and other high density home developments..

Spend a little extra dollars today - to benefit for all the years to come..Truly this is a legacy opportunity, not to allow to slip through the fingers of our elected regional reps...

Sincerely to you.

Re: Bylaw No. 593 Applicant: Unger

Proposed: Rezone from Rural Eight (RU-8) to Residential One Exception Ten (R-1-10)

JAN 22 2020

File:

Attention: Brian Chow Rural Planner, Chair and Directors Edwin Grieve, Arzeena Amir, Daniel Arbour, and Staff of the Electoral Area Services Committee.

PURPOSE

To honour and steward the traditional land of the K'omoks and We Wai Kai families that is now known as the 'Saratoga Wetlands'.

KEY CONSIDERATIONS

I know this piece of land well and it is my opinion due to hydrology including both the surface, and ground water, this is not a suitable site for residential development and will result in serious impacts to the adjacent Saratoga Wetlands riparian salmon habitat. The creek and stream empty to the sensitive riparian zone, the Saratoga Wetland. (figure 6) to the NW - immediately adjacent to the Unger property. With the old 1 in 200 year rain events we now experience several times a year, the water flows in the Saratoga Wetlands are excessive and flood the north side of the Unger property.

CURRENT SITUATION

- The streams through the Unger property runs consistently 12 months of the year and is habitat for many species of bird and wildlife.
- An accessible connecting network of trails or roadside walkways do not exist in this community.
- Black Creek and Oyster Bay water capacity remains unknown and additional water hook-ups have exceeded what was assessed in 2011.
- This land will not perk for conventional septic waste systems. (septic tank and field).

BACKGROUND

On the North side of the property is another watercourse, riparian area that also runs consistently 12 months of the year, it is known to have populations of Coho salmon, and invertebrates. This creek originates to the west of Paulsen road at what was once a wetland habitat prior to the current owner 'Kip Keylock', who drained and diverted water by excavating a network of large, smooth, open ditches.

NEXT STEPS / OPPORTUNITIES

1. Due to the proximity of the Saratoga Wetlands it is necessary that any development construction be conducted in such a manner so that there is minimal impact to the existing vegetation, forest floor and recovering canopy from the clear cut harvesting the owners completed roughly 12 years ago.
2. By accessing funding through the parkland acquisition fund, this large connecting park area and wild life corridor will enhance and expand the appeal for the tourist experience. Rewarding the immediate economic possibilities forever and the CVRD's tax base realized from this boost to property development at the Saratoga Beach estates and other high-density home developments.
 - The trail network would connect a sustainable wildlife corridor from the Miracle Beach School and Wilfred road along the boundary of the Saratoga Wetland connecting to the regional Driftwood Marine Park on Clarkson road and north to the expansive sands of Saratoga Beach, where the Oyster River meets the Salish Sea; or south to the Heritage Site of Traditional Fishing in the Black Creek estuary as you enter Miracle Beach Provincial Park.

Re: Bylaw No. 593

My comments/concerns are:

- I do support this bylaw.
- I do support this bylaw, subject to the conditions listed below.
- I do not support this bylaw.

TO BE ENTERED INTO
THE MINUTES

- TOTAL WATER CAPACITY HAS BEEN AT TIPPING POINT FOR YEARS, AS IDENTIFIED BY MANY STUDIES. SINCE STUDIES, GET MORE DEVELOPMENT HAS BEEN APPROVED WITHOUT CORRESPONDING CAPACITY INCREASE TO SOURCE
- REZONING IS THIN EDGE TO FACILITATE SUBDIVISION APPLICATIONS IN EXCESS OF THE 3 LOTS PROPOSED.
- COMMUNITY NOTIFICATION / ENGAGEMENT IS A SHAM! (50 METERS IN RURAL SETTING IS ABSURD) WEEKS TO REPLY GIVEN VS. EG. - OUTSIDE AGENCIES GIVEN 1YR+ - 1ST NATIONS > GIVEN 1YR+ =

- CVRD OWN DELIBERATIONS FOCUS ON 'DENSITY BONUS AWARDS' INSTEAD OF FOLLOWING THE COMMUNITY WISHES FOR LOWER DENSITY, KNOWING THE WATER AVAILABILITY

- THE UPSTREAM DEVELOPMENT CURRENTLY UNDERWAY IS ALREADY IMPACTING WATER FLOWS, INCREASED TURBIDITY

- THE RESULT WILL CONTINUE TO AFFECT THE SARASOTA MARSHLANDS & ADJACENCIES NEGATIVELY

- THE WATER COURSE THROUGH THE PROPERTY ~~IS~~ IS INTEGRAL TO THE WIDER AREA HYDRONICS SYSTEMS.

- WORST CASE SCENARIO IS TO ALLOW THE CURRENTLY APPROX 2 HOUSEHOLDS ON ONE, UNDIVIDED LOT. BEST CASE WOULD BE TO ACQUIRE / EXPROPRIATE THIS LAND FOR PUBLIC FISHERIES FLORA & FAUNA, IE PARKLAND

- AMOUNT PROPOSED TO BE DONATED LAND IS A FRACTION OF AMOUNTS SHOWN AS SET ASIDE IN EARLIER PLANNING SESSIONS FOR THE AREA

Re: Bylaw No. 593

My comments/concerns are:

- I do support this bylaw.
- I do support this bylaw, subject to the conditions listed below.
- I do not support this bylaw.

Water is an issue, we have lived on our street for 7½ years and have walked the area in ALL seasons + weather conditions. Development of this property will cause further standing water in the ~~so~~ zone allotted to community contribution. Causing disturbance to bordering water lands. Flooding and standing water causing further problems with Mosquitoes ~~to~~ which has been a huge issue already in 2018 + 2019. Lack of notice a time ~~from~~ for preparation for your public meeting on this subject is an embarrassment.
